Installation Guide

# Installation Steps

The Signature Mirrors and the Thermomirror Demister Pads are supplied as two separate components. Signature Range Mirrors are supplied as standard with glue-to-wall fixings.

## Installation Steps

1. Glue-to-wall mirrors must be installed onto a level surface otherwise the double-sided tape will not hold while the mirror adhesive sets. Make sure the mirror adhesive selected is compatible with the mirrors as some will damage the mirror backing. Mirror adhesive must be used in conjunction with the double-sided tape. The Thermomirror demister requires a mains supply and a switch or PIR sensor. Measure and mark out all necessary items before you install the Thermomirror. Cut out a hole in the wall behind the mirror position to allow for the connection box of the demister pad.
2. Ensure the mains power supply is switched off before attempting to carry out any electrical work. Wire up the demister lead in accordance with current electrical regulations and leave the female plug protruding from the cut out made for the connection box.
3. Peel off the four squares of protective paper from the back of the demister pad. Connect the male and female plugs of the demister pad and ensure this is pushed insecurely. Push the cabling from the demister into the wall cavity and adhere the demister to the wall. Peel off the protective paper backing from the front of the demister.
4. Apply mirror adhesive to the back of the mirror. Ensure the adhesive is run in vertical beads so that the condensation behind the mirror can drain away. Stick the mirror in position. The use of timber supports to cut the height required off the vanity is also recommended for ease of installation, this will keep the mirror at the desired height. As double-sided tape makes contact to the wall, it will adhere solidly making it almost impossible for a second chance. Selection of correct adhesive and support whilst drying is the responsibility of the installer and is not covered under warranty.

# Warranty Information

Thermogroup covers all its products with a satisfaction guarantee. In addition, Thermogroup will supply a replacement product where a fault is shown to be caused by manufacture, materials or workmanship providing the goods have been installed correctly and according to installation instructions. This guarantee does not include removal, freight or installation costs. Thermogroup's products come with guarantees that cannot be excluded under Australian Consumer Law and you are entitled to a replacement or refund for a major failure & compensation for any other reasonable foreseeable loss or damage. You are also entitled to have the goods repaired or replaced if the goods fail to be of acceptable quality and the failure does not amount to a major failure.

The Signature Range Mirrors have a 3 Year warranty and the Thermomirror Demisters have a 5 Year warranty. To use the warranty, repair or service the customer must provide purchase invoice/receipt.

If the product develops a fault within the warranty period due to normal wear and tear, Thermogroup at its discretion will recognise whether it's a faulty product or not. If it is impossible or not economical for the manufacturer to repair the product, the manufacturer will replace the faulty product with a new unit of the same model or if there is no stock available of the same model as the product, the manufacturer will replace the product with a new unit of a similar size. No responsibility can be taken for altered dimensions and lining up of existing holes.

The repair service offered within the warranty period only covers the faults and problems as developed from the manufacturer's errors. Any damage caused by improper use or carelessness or incorrect wiring is not covered.

Thermogroup is not responsible for any monetary loss or injuries caused by improper use of this product.

## Care and Maintenance

For best results clean mirror with methylated spirits and water at a rate of 30% methylated spirits and 70% water. Do not use Windex or similar cleaning products. Avoid getting water on the sides or back of the mirror as damage to the silver backing can occur. In coastal areas it is recommended to wipe around the edge of the mirror regularly to avoid salt build up that can cause silver creep.
