

Thermogroup
 That little bit extra...

2025 Product Guide

Our Values

Trust

We operate on the basis of trust. Speed happens when people trust each other, allowing us to serve our customers in the best possible way.

Passionate

Through a love of what we do, we delight our clients. We are serious about results and are driven by our sense of urgency to achieve. We are focused on our goals and wholeheartedly committed to always giving 100%.

Continuous Improvement

We do not fear change; instead, we encourage innovation, creativity and being on the leading edge. There is always further to go and more to explore through challenging the status quo.

Put Customers First

We put customers at the centre of everything we do to ensure we achieve the very best outcome for the customer. We are committed to going above and beyond to deliver that little bit extra.

Strive for Simplicity

We believe that there is always a simpler way of doing everything and we are committed to finding the simplest option in every scenario.

Positive

Positivity is a choice to be optimistic, content, and upbeat. We aim to create an environment where positivity can thrive, so people can laugh, have fun and do good.

Celebrating over 20 years of giving that little bit extra

About Us

Thermogroup is a passionate family business that is humbled by our achievements and excited about the future.

From our humble beginnings in 2003, we have grown to become one of the most respected brands in the marketplace today. Our brand is stronger than the suite of products that we offer. You may have noticed the Chilli in our logo and wondered what it's about? The chilli is a representation of our brand, the essence of who we are.

Our products provide heat and warmth, but it goes a lot further than that. It is our service, our support, our speed, our willingness to respond, and indeed everything that we do, it has to be the best for the customer and deliver that little bit extra. It is just who we are.

Thermogroup is proud to have provided over two decades of commitment to delivering that little bit extra. Our journey started in a garage but was powered by a dream and since then every product, every shipment, every home we've touched, we've always aimed to deliver that little bit extra.

Hear from the team and what delivering that little bit extra means to them in our 20 year video.

Creating a sustainable electric future

Homeowners, governments and the energy sector are looking for ways to reduce the use of fossil fuels and utilise clean, affordable energy sources.

Electricity is one of the best choices for a clean, future-proof heating system as opposed to traditional forms of heating. Electricity is increasingly being generated by renewable sources on both a domestic and commercial scale.

Electric Underfloor Heating systems reflect the benefits of electric heating in the following ways.

100% efficient at the point of use. Every unit of electricity that you pay for becomes heat energy.

All of our heating products can be run using a solar electric system.

Thermostats allow for a higher level of monitoring and control than other forms of heating.

Zero ongoing maintenance and very low lifetime cost when compared to a gas or aircon heating systems.

Much lower safety risk than a gas system as there is no fossil fuel consumption and no potential for gas leaks or carbon monoxide issues.

Insulation helps to reduce heat loss, improve the efficiency of the system and reduce running costs.

The benefits of Thermogroup Underfloor Heating

Comfortable heat

Underfloor Heating spreads heat evenly across the floor allowing it to naturally and gently heat the room.

Energy efficient

Hot air rises naturally making heating at ground level an efficient way to heat the room.

Accurate control

With the use of a programmable thermostat you can control when your floor heating is on and off and control the temperature.

Allergy friendly

There is no air or dust movement, making it the perfect system for allergy or asthma sufferers.

Warm floors

Eliminate cold floors and experience warmth and comfort from your toes up.

Zero maintenance

Our systems are electric, meaning they are maintenance and hassle free.

Lifetime warranty

Every system is tested in our manufacturing plant in the UK and we can offer you peace of mind with our lifetime cable warranty.

Rapid heat-up time

With Underfloor Heating installed directly below your tiles you have an on-demand heating system.

Interior design freedom

With the heating system invisible below your floor you can design your room how you please without any heaters to work around.

How does Underfloor Heating compare to traditional heating?

An electric Underfloor Heating system provides an energy efficient, on demand heating system as well as interior design flexibility which improves comfort and space for everyone.

Radiators and Air Conditioning

Inefficient convection heating

Traditional convection heaters distribute heat unevenly throughout a room, resulting in drafts, hot heads and cold feet.

Heating in this way usually means your thermostat must be set to a higher temperature to achieve the desired comfort level, which increases heat loss and energy bills.

As the heat moves away from the single heat source in the room it cools making it uneven and uncomfortable.

Underfloor Heating

Improved efficiency and comfort

Electric Underfloor Heating is a system by which a series of electric heating cables are run below the floor finish. The entire floor then becomes a heater with the heat gently radiating up from the floor into the room. Hot air naturally rises, therefore heating from the floor is the most efficient and effective form of heating and it gently, evenly and silently warms any room creating a comfortable and enjoyable environment.

Where the heating covers more than 80% of the room it can be used as the primary heat source. You can also free up valuable wall space creating freedom for interior design.

Helping you to understand Underfloor Heating

Underfloor Heating provides the most comfortable form of affordable and efficient heating that you could desire for your home. We have put together some key content to help you better understand Underfloor Heating.

The Golden Rule of Underfloor Heating

Never Cut the Cable

An Underfloor Heating cable cannot be cut or shortened. As it is a resistive cable, no Underfloor Heating cable can be cut or shortened even if it's done by an electrician. Underfloor Heating should not be installed under floor mounted fixtures (i.e. toilet or cabinetry) so make sure you select the right size kit for the room.

How much Underfloor Heating do I need?

Overall Room Size

Work out the overall floor area of the room.

Subtract Fixtures

Minus all the floor mounted fixtures from the overall floor area to give you the square metres of the available floor area.

Select Size

Match the available floor area with the correct size system for your floor build up.

Free Quoting Service

Thermogroup offers an obligation free quoting service. Simply send us your plan showing your room size and fixtures, specify the floor finish and we will provide a quotation for your specific requirements.

Simply email your plan to sales@thermogroup.com.au or use our online quoting tool.

Helping you to understand Underfloor Heating

Who installs the Underfloor Heating?

Every Underfloor Heating System comes as a complete product, you don't need to make any electrical connections whilst laying the system. This means the Underfloor Heating can be installed by anyone; the electrician, tiler, builder, or even the home owner*.

Typically, the electrician will install the floor heating as they will need to do the pre-wiring, testing and fit off the thermostat regardless of who lays the heating.

**This may vary for your state so check local guidelines.*

Will Underfloor Heating heat my room?

Yes, as long as at least 80% of the floor is covered with Underfloor Heating it can be used as the primary heat source to heat your entire room. Insulation below the Underfloor Heating will further help to improve the heat performance in the room.

The Power of Insulation

Whilst insulation won't increase the temperature of the heating in your room, installing a layer of insulation below your Underfloor Heating will help to reduce heat loss.

This improves the heat-up times and reduces the running costs to improve the overall efficiency by up to 50%.

Refer to pages 48-53 for further information.

Mats vs Loose Wire

The difference between the systems lies in the installation of the heating. Once installed, there is no difference in the warmth of your floor.

The advantage of the matting system is the speed and ease of installation. With the cables already pre-spaced on the mesh, you can cut through the mesh without cutting the cable, to manipulate the mat to run out across the floor.

With a loose wire Underfloor Heating System, the cable is supplied on a reel rather than being attached to a mesh. The cable is then run out across the floor to achieve full coverage of the heated area.

Scan the QR Code to read more on our blog.

Underfloor Heating Costs

How much does Underfloor Heating cost to run?

Based on an insulated floor with a 150W/m² Underfloor Heating system and an electricity tariff of 34c/kWh, the cost to run the Underfloor Heating will be \$0.05 per hour per square metre. This is based on the system being actively running for the full hour, once the floor reaches the set temperature it will operate only to maintain the temperature level. The system will then heat for about 40% of the time to maintain the temperature.

The best way to control your running costs is with your Thermostat by setting up a heating schedule so the heating is only on when you need it. The Thermostat will also allow you to set a comfort temperature of around 22-24°C.

Scan the QR code to use our online running cost calculator

Run your Underfloor Heating for the cost of a cup of coffee

A typical bathroom of 3.0m², running for two hours in the morning and two hours in the evening, would cost around \$5.75 a week to run, around what it costs for a takeaway coffee.

Underfloor Heating proves to be one of the most cost effective and definitely the most comfortable way to heat a home.

How much does an Underfloor Heating system cost?

Whilst this will vary based on your requirements, the most common bathroom size is 3.0m². This is the size of the heatable area once all fixtures have been removed.

Based on this, a 200W Thermonet Kit including the mat and controller would cost **\$819.00** to purchase.

Underfloor Heating heat-up times

The floor construction and finish will govern heat-up times. Sufficient insulation such as Econoboard, will greatly reduce heat-up times and you will notice the difference in your energy bills (refer to pages 48-53). A well insulated Underfloor Heating system can be up to 50% more efficient than an un-insulated system, especially when managed by a programmable Thermostat. Average heat-up times can be seen in the table below:

System	150W/m ²	200W/m ²
Un-insulated Concrete	2 - 4 hours	1 - 3 hours
Concrete with 10mm Econoboard	45 mins	30 mins
Concrete with 10mm Econoboard & 25mm Screed	2 hours	90 mins
Un-insulated Timber Substrate	1 hour	45 mins
Timber Substrate with 10mm Econoboard	45 mins	30 mins

(Allow an additional 1 hour per 25mm of screed for heat to penetrate)

PLEASE NOTE: The information provided on pages 10-14 is gathered from multiple online sources and provided as an illustrative example only. This information does not imply any warranty or guarantee of energy consumption and/or electricity costs. E&OE.

Underfloor Heating in your shower

Thermogroup Underfloor Heating systems are designed to be safely installed in a tiled shower which brings some distinct benefits to your bathroom.

Although putting Underfloor Heating in the shower is often deemed unnecessary as the hot water warms the floor, the key benefit is that it dries the floor eliminating the build-up of mould and grout discolouring as well as reducing the slip hazard.

Our Underfloor Heating systems are fully waterproof meaning that the same system can be used for the shower and main floor.

To achieve a primary heat source from your Underfloor Heating, 80% of the floor needs to be covered which is difficult in a bathroom due to the fixtures so heating in the shower also helps add warmth to the room.

Can I run Underfloor Heating up the wall behind my towel rail to dry my towels?

Yes, this can be done, however, as a simpler alternative we recommend you check out our Thermorad solution on pages 60-63.

Which Underfloor Heating system is best for your project?

Undertile Heating

Thermonet 150W/m²

Thermonet 150W/m² is an Underfloor Heating mat system that is specially designed to be installed directly beneath your tiles in large areas. See more details on pages 22-23.

Thermowire 13W/Lm

Thermowire is the traditional loose wire heating system that is designed to be installed directly below the tiles in small, awkward areas. See more details on pages 32-33.

In Screed and Under Stone Heating

Thermonet 200W/m²

Thermonet 200W/m² is an Underfloor Heating system that is designed to be installed in the screed layer, or directly below the tiles when installed in a bathroom, and allows for quick and easy installation. See more details on pages 24-25.

Thermoscreed 18W/Lm

Thermoscreed is a heavy duty 5.5mm thick cable that is designed to be installed in the screed layer for small, awkward areas. See more details on pages 34-35.

Under Timber, Carpet and Laminate Heating

Thermofoil 140W/m²

Thermofoil is specially designed to operate in a void i.e. between carpet or timber flooring and the underlay, making installation extremely quick and easy. See more details on pages 38-39.

In Slab Heating

Thermoslab 30W/Lm

Thermoslab is a versatile, robust 7mm thick heating cable that is designed to be attached to the concrete mesh prior to the concrete being poured. See more details on pages 40-41.

Insulation

Insulation below your Underfloor Heating reduces heat-up times and running costs. See more details on pages 48-53.

Heating System Selector Tool

Use our online Heating System Selector tool to determine the best Underfloor Heating system and accessories based on your application.

Thermonet Underfloor Heating Systems

Thermonet is a versatile electric Underfloor Heating mat system designed for easy installation under a range of floor finishes.

There are two different Thermonet systems, providing an option for undertile and in screed, each offering the benefits of our market leading matting system.

Lifetime warranty

We are so confident in the quality of our UK manufactured Thermonet Underfloor Heating that we give each system a warranty that lasts a Lifetime with a 3 year warranty on our Thermostats.

Twisted Twin cable construction

Our cables have a unique construction where the two heating cores are twisted together inside the cable making it extremely durable, reducing stress on the cable and eliminating any electromagnetic field. The Zero EMF credentials are unique and gives you peace of mind that your Underfloor Heating will have no negative effect on your body.

Fully self adhesive mesh

The self adhesive mesh speeds up installation by holding the Thermonet matting to the substrate for easy self-levelling and tile fixing. It also ensures an even and consistent cable spacing across the floor to ensure an even heat.

Heating cable protection

Thermonet is installed wire-side down which means the heating cable is protected from damage during installation by the hard wearing mesh layer.

Minimal height build-up

Utilising innovative extrusion processes provides real 'lay flat' technology that makes installing Thermonet easy. The matting system is only 3.5mm thick with a low profile cold tail of only 4mm thick which is typically concealed within the tile adhesive layer.

Thermonet Installation Overview

This diagram displays a typical bathroom layout with Thermonet Underfloor Heating. The mat system ensures a fast and simple installation with the heating mat covering the entire available floor space. Some of the key features of the Thermonet Underfloor Heating systems have been highlighted below.

1. Modify the mat

When Thermonet mats are needed to fit around irregular shapes like a toilet or vanity, simply remove the cable from the mesh and arrange in loops to cover the area.

2. Wall mounted fixtures

If you have a wall hung vanity, always allow enough floor heating to run under the front of the vanity to ensure this floor area is warm.

3. Floor sensor and conduit

Ensure the floor sensor is installed in the conduit and placed centrally between two runs of heating cable to provide an accurate floor temperature reading.

Scan the QR Code to watch the Thermonet installation video

Cut-and-return installation explained

Every room is different, and you will usually need to modify your Thermonet mat in some way to fully cover your desired heating area. The diagrams on this page will help you to manipulate your Thermonet mat safely and avoid causing any damage during installation.

Cutting the mesh

Use scissors to carefully cut the blue mesh

Turn 180°

Turn the mat 180° laying parallel to the first run

Avoid an obstacle

Release cable from mat and run it either side of an obstacle

90° turn

Release cable from mat for a 90° turn

NEVER CUT THE HEATING CABLE! When performing any of these mat modifications, it is vital that you do not cut or damage the heating cable. Damaging or shortening the cable will void your warranty and cause the cable to burn out or not work.

Thermonet floor build-ups

Thermonet electric Underfloor Heating can be used in almost any floor build-up or with any floor finish from tiles and vinyl to carpet and timber floors.

- ① Glued vinyl floor finish
- ② Flexible self-levelling compound*
- ③ Thermonet heating mat
- ④ Econoboard insulation***
- ⑤ Prepared substrate

- ① Engineered timber floor finish
- ② Flexible self-levelling compound*
- ③ Thermonet heating mat
- ④ Econoboard insulation***
- ⑤ Flexible tile adhesive (if insulation is installed)
- ⑥ Prepared substrate

- ① Carpet floor finish**
- ② Low tog underlay**
- ③ Flexible self-levelling compound*
- ④ Thermonet heating mat
- ⑤ Econoboard insulation***
- ⑥ Prepared substrate

*Minimum recommended thickness of 10mm. **Combined TOG rating needs to be under 2.5. ***Optional insulation layer

Thermonet 150W/m² Underfloor Heating Systems

Designed for use directly below the tiles, especially in larger areas.

Thermonet Underfloor Heating

20

Rapid heat-up time

As the 150W system is installed directly below your tiles (up to 12mm thick) it provides a rapid heat-up time through the tile layer. A layer of insulation below the heating will further help to improve the heat-up times and prevent downward heat loss.

Ideal for larger areas

The Thermonet 150W system is ideal for areas with a large floor surface. The mat provides an adequate heat source directly below the floor finish. The mat range includes mat sizes up to 16m², ideal for larger areas such as living rooms, kitchens and hallways.

Adaptable for multiple floor finishes

Whilst primarily designed for use directly below tiles, the 150W system can also be used for other floor finishes such as carpet, vinyl or glued floor finishes, provided it is covered with a 10mm layer of self-levelling compound and you have checked with the flooring manufacturer regarding compatibility.

Thermonet 200W/m² Underfloor Heating Systems

Designed for use in bathrooms either directly below the tiles or below the screed.

Ideal for rooms with limited floor space

The 200W/m² system ensures the maximum heat output for the available floor area. This particularly applies in the case of a bathroom, where a lot of the heated floor area can be lost with floor mounted fixtures.

Perfect for high heat loss applications

The high heat output of the 200W mats make them perfect for rooms that are prone to high heat loss. This can be further reduced by adding a layer of insulation below the heating.

Suitable for use in the screed

Suitable for installation in screeds of 20mm to 50mm to create a thermal mass. The 200W output ensures rapid heat-up time even through the screed. Installing a layer of insulation below the heating will further improve the heat performance.

What is a Screed?

A screed is a cement layer that is used to give a smooth level finish to a floor. Typically a screed is used in bathrooms to get the fall across the floor to the floor waste. When a screed layer is being laid, the Underfloor Heating is typically installed below the screed.

Thermonet 150W Underfloor Heating

150W Undertile Heating Mat Only

Stock Code	Size (m)	Area (m ²)	Output (W)	Amps (A)	RRP \$ Incl.	Thermostat Kits

150W Undertile Heating Kits

Included in all kits are:

Heating Mat

Your selected size of
Thermonet 150W Mat

Thermostat

Your chosen Thermostat
from below which includes
a floor sensor & conduit

Cable Monitor

Measures the integrity of
the cable during install and
sounds an alarm if damaged

Cloth Tape

For fixing loose runs of
cable and holding down
corners of the mat during
install

Standard Control White T Kits

Thermostat Code: 5220A

Kit Code: Add 'T' to the end of the heating mat code. *E.g 111502T*

Price: Add \$330.00 to RRP \$ Incl. of the mat price.

Standard Control Black TB Kits

Thermostat Code: 5226A

Kit Code: Add 'TB' to the end of the heating mat code. *E.g 111502TB*

Price: Add \$330.00 to RRP \$ Incl. of the mat price.

For more Thermostat information see page 43 for details.

Dual Control White TD Kits

Thermostat Code: 5245

Kit Code: Add 'TD' to the end of the heating mat code. *E.g 111502TD*

Price: Add \$490.00 to RRP \$ Incl. of the mat price.

Dual Control Black TDB Kits

Thermostat Code: 5246

Kit Code: Add 'TDB' to the end of the heating mat code. *E.g 111502TDB*

Price: Add \$490.00 to RRP \$ Incl. of the mat price.

For more Thermostat information see page 44 for details.

Wi-Fi Control TWF Kits

Thermostat Code: 5235W*

Kit Code: Add 'TWF' to the end of the heating mat code. *E.g 111502TWF*

Price: Add \$490.00 to RRP \$ Incl. of the mat price.

*Black faceplate also available.

For more Thermostat information see page 45 for details.

Thermostat

Your chosen Thermostat from below which includes a floor sensor & conduit

Cable Monitor

Measures the integrity of the cable during install and sounds an alarm if damaged

Cloth Tape

For fixing loose runs of cable and holding down corners of the mat during install

Standard Control White T Kits

Thermostat Code: 5220A

Kit Code: Add 'T' to the end of the heating mat code. *E.g 112002T*

Price: Add \$330.00 to RRP \$ Incl. of the mat price.

Standard Control Black TB Kits

Thermostat Code: 5226A

Kit Code: Add 'TB' to the end of the heating mat code. *E.g 112002TB*

Price: Add \$330.00 to RRP \$ Incl. of the mat price.

For more Thermostat information see page 43 for details.

Dual Control White TD Kits

Thermostat Code: 5245

Kit Code: Add 'TD' to the end of the heating mat code. *E.g 112002TD*

Price: Add \$490.00 to RRP \$ Incl. of the mat price.

Dual Control Black TDB Kits

Thermostat Code: 5246

Kit Code: Add 'TDB' to the end of the heating mat code. *E.g 112002TDB*

Price: Add \$490.00 to RRP \$ Incl. of the mat price.

For more Thermostat information see page 44 for details.

Wi-Fi Control TWF Kits

Thermostat Code: 5235W*

Kit Code: Add 'TWF' to the end of the heating mat code. *E.g 112002TWF*

Price: Add \$490.00 to RRP \$ Incl. of the mat price.

*Black faceplate also available.

For more Thermostat information see page 45 for details.

Loose Wire Underfloor Heating Systems

Loose wire systems are the traditional form of Underfloor Heating and are the perfect solution for installing in small, awkward areas.

Our loose wire Underfloor Heating systems offer the flexibility of loose wire installation with our superior heating cable, and an option for undertile or in screed.

Lifetime warranty

We are so confident in the quality of our UK manufactured loose wire Underfloor Heating cables that we give each system a warranty that lasts a Lifetime, with a 3 year warranty on our thermostats.

Variable output Underfloor Heating

The cable system allows you to space the heating cables yourself to achieve a desired layout and heat output per m². For larger areas directly undertile we would recommend an output of 150W/m² and for bathrooms, either above or below the screed, we would recommend an output of 200W/m².

Twisted twin cable construction

Our cables have a unique construction where the two heating cores are twisted together inside the cable making it extremely durable, reducing stress on the cable and eliminating any electromagnetic field. The Zero EMF credentials are unique and gives you peace of mind that your Underfloor Heating will have no negative effect on your body.

Cloth tape for fixing to the substrate

Both the undertile and in screed loose wire systems are supplied with a roll of cloth tape for taping the cable to the substrate.

Ideal for irregular shaped areas

The layout is totally flexible and can be designed to fit around furniture and fixtures in small or irregular shaped rooms.

Loose Wire Installation Overview

This diagram displays a typical bathroom layout with loose wire Underfloor Heating. The loose wire cable provides flexibility when running across the floor and is shown being held down with cloth tape.

1. Install flexibility

The loose wire cable allows you to run the cable across the floor and tape it to the substrate. Ensure even cable spacing across the room for an even heat feel.

2. Wall mounted fixtures

If you have a wall hung vanity, always allow enough floor heating to run under the front of the vanity to ensure this floor area is warm.

3. Floor sensor and conduit

Ensure the floor sensor is installed in the conduit and placed centred between two runs of heating cable to provide an accurate floor temperature reading.

Scan the QR Code to watch the loose wire installation video

Cable Spacing Formula

The loose wire cable provides spacing flexibility to suit your room. It is important to maintain an even, consistent spacing across the room to eliminate hot and cold spots.

The cable spacing formula below will help to work out the exact cable spacing. We recommend installing with an output of 150W/m² when undertile in areas outside the bathroom and 200W/m² for under a screed or in the bathroom. To achieve the recommended outputs, the recommended cable spacing is 70 - 90mm while the minimum cable spacing is 50mm and the maximum spacing is 110mm.

Available floor space (m²) x 100

Kit length (m)

=

Cable spacing (cm)

Installation Accessories

The loose wire heating cables can be fixed in position with one of three fixing methods. The cloth tape is the standard fixing method used on any substrate and is included as standard with all cables. The Thermoscreed system can also be installed using the Galvanised Fixing Profile or In Screed Cable Mesh.

Cloth Tape

A 25m roll of cloth tape is included with all cables as a standard fixing method for use on any substrate.

Galvanised Fixing Profile

Galvanised steel fixing profile can be mechanically fixed to timber or concrete substrate before waterproofing. Allow 1m of fixing strip per 6m of heating cable.
(Thermoscreed Cable Only)

In Screed Cable Mesh

A 4.5m² roll of loose lay mesh which is designed for loose laying over a waterproofed substrate.
(Thermoscreed Cable Only)

Stock Code	Description	Size	Unit	RRP \$ Incl.
3255	Cloth Tape	36mm x 25m	Roll	Supplied free of charge with cable
3259	Galvanised Fixing Profile	25m	Roll	\$150.00
3263	In Screed Cable Mesh	4.5m²	Roll	\$82.00

Thermowire Underfloor Heating System

thermowire
UNDERFLOOR HEATING

Thermowire is the traditional method of installing Underfloor Heating directly below your tiles utilising a loose wire system.

The Thermowire cable is ideal for use directly below the tiles in small, awkward areas through providing flexibility and ease of installation.

Undertile heating

The thin profile of Thermowire means that it can be installed in the layer of tile glue therefore not adding any additional height to your floor build-up. It can also be covered with a layer of self-levelling compound to allow it to be used in conjunction with other floor finishes.

Robust thin heating cable

The Thermowire cable is only 3.5mm thick however it has a unique twisted twin construction which gives it the superior strength to last a lifetime.

Rapid heat-up time

With the Thermowire cable installed directly below the tiles you will experience rapid warmth to your floors. We recommend installing with an output of 150W/m² when directly undertile in areas outside the bathroom and 200W/m² for the bathroom.

Thermoscreed Underfloor Heating System

thermoscreed
UNDERFLOOR HEATING

Thermoscreed is designed for use below your screed, ideal for creating a heat bank below your floor finish. Designed for use in 20 - 50mm screed layers.

Offering the flexibility of loose wire heating with a robust cable, designed to provide suitable heat performance through a screed layer.

In screed heating

Suitable for installation in screeds of 20mm to 50mm and is recommended to be installed on top of insulation boards for improved heating performance. Suitable for use with sand and cement, or anhydrite or flow screeds.

Efficient storage heating

In screed systems have a slightly slower heat-up and cool down time as opposed to undertile systems, and this varies based on the thickness of the screed. Thermoscreed creates an energy efficient thermal mass below your floor by warming the entire screed which continues to radiate heat upwards after the system is off.

Robust hard wearing cable

The advanced protective PVC coating on Thermoscreed cables protects the heating element during installation and during the screed pour. At 5.5mm thick, the robust cable is designed to last a lifetime.

Thermofoil Underfloor Heating System

Thermofoil is an electric Underfloor Heating foil designed for floating laminate, carpet and floating engineered timber floor finishes.

Bring the luxury feeling of Underfloor Heating and the simplicity of an electric system to engineered timber, laminate and carpet floors.

Lifetime warranty

We are so confident in the quality of Thermofoil that we give each system a warranty that lasts a Lifetime, with a 3 year warranty on our Thermostats.

Efficient heat exchange foil

The double layer of foil in Thermofoil is specifically designed to protect the heating element and achieve an even spread of heat to the floor above.

Easy cut and return installation

The accessible cable loops are a unique feature of our foil system. They make cut and return installation quick and easy while protecting the heating element.

Continuous earth protection braid

Electrical safety is paramount and Thermofoil's continuous earth braid protection runs the entire length of the heating cable.

Minimal height build-up

The foil system is only 2.5mm thick with a low profile cold tail of only 4mm, which can be concealed within the insulation or underlay. Please note, the Thermofoil will need to include underlay and overlay and these will increase your floor height build-up.

When installing under soft floor finishes such as carpet or engineered timber, please be sure to consult the floor finish manufacturer for guidance on compatibility and maximum temperature.

Thermofoil Underfloor Heating System

Thermofoil is the most advanced electric Underfloor Heating foil available. Innovations such as our exposed cable loops and continuous earth protection ensures easy installation and total safety. Thermofoil is a versatile system that can be used in many different floor configurations.

Carpet floor solution

Floating timber floor solution

Thermofoil Heating Mat System

Stock Code	Size (m)	Area (m ²)	Output (W)	Amps (A)	RRP \$ Incl.

121424	24 x 0.5	12.0	1680	7.00	\$1,689.00

Remember to order your chosen Thermofoil system, a Thermostat (see pages 43-46) and the suitable underlay and overlay for the floor build-up.

Thermofoil overlay and underlay accessories

Overlay and underlay are essential for a long lasting floating heated floor construction.

Econosoft Underlay

All Thermofoil installations require a cushioning underlay. Econosoft is a 5mm cushioning underlay that can be used with any Thermofoil installation. This can be substituted with a standard carpet or hard floor underlay.

Econosoft Overlay

An essential 1.5mm cushioning overlay that also acts as a vapour and acoustic barrier and should be included above Thermofoil in every application.

Stock Code	Description	Size	Thickness	Unit	RRP \$ Incl.
5400	Econosoft Cushioning Underlay	1200 x 500mm	5mm	10 Pack (6m ²)	\$185.00
5421	Econosoft Cushioning Overlay	10m x 1m	1.5mm	Roll (10m ²)	\$325.00

Thermoslab Underfloor Heating System

Thermoslab is a brilliantly versatile, robust, 7mm thick Underfloor Heating cable designed for use In Slab. Thermoslab heating will take some time to initially heat-up, as much as 1-2 days, however the slab will become a thermal heat mass and slowly release this heat up into the room. Due to the nature of the heating, where possible, it is recommended to connect the slab heating to an off-peak meter or solar system to save on running costs. For more details on off-peak and the suitable thermostats to use, refer to page 46. The formula below will help to work out which heating cable is required.

$$\text{Available floor space (m}^2\text{)} \times 5 = \text{Required cable length (m)}$$

Thermotouch Underfloor Heating

Thermostats help you control your Underfloor Heating and save you money

Our Thermostats provide accurate floor and ambient temperature control combined with a heating schedule that only heats when you need it and helps to reduce your running costs.

Thermostat Controls

Fully programmable*

Create an on demand heating schedule to provide heat only when you need it.

Accurate control

Accurate ambient and floor sensors provide total control over your heating system. **

Easy installation

Easy installation into the mains electricity supply.

Sensor and conduit

All Thermostats include a floor sensor and conduit. The conduit is provided for the sensor installation.

Range of options

Our range includes options from Programmable to Dual Control, Wi-Fi and even Manual Thermostats.

Three year warranty

All of our Thermostats are covered by a three year replacement warranty.

*Excluding the manual controllers on page 46 which are designed for use with off-peak or home automation

**The 5255 and 5291 Thermostats on page 46 use floor sensors only

Thermotouch 7.6iG Glass Programmable Thermostat

Have full control over your electric Underfloor Heating system with the Thermotouch 7.6iG fully programmable glass Thermostat.

The Thermotouch 7.6iG Programmable Thermostat features a fully programmable 7 day heating schedule with 6 heating events every day of the week. The ice white and piano black glass fascias and clean lines are a perfect match for any modern interior.

Thermotouch 4.3dC Dual Programmable Thermostat

Thermotouch 4.3dC is a Dual Thermostat that can control both your Underfloor Heating and electric Heated Towel Rail, Thermorad or Mirror Demister.

The Thermotouch 4.3dC has been designed to deliver an easy to use electric Underfloor Heating Thermostat that has all the functionality required yet is simple to operate. The second relay operates an independent timer allowing separate heating schedules for your Heated Towel Rail, Thermorad or Mirror Demister.

Whilst the Thermotouch 4.3dC is supplied with a floor sensor, it is also compatible with the most popular floor sensors on the market making it suitable as an upgrade for your current Thermostat.

Thermotouch 4.3dC Thermostat included in all TD & TDB Underfloor Heating kits - pages 23, 25, 33 and 35.

*16 Amp relay for the Underfloor Heating and 5 amp relay for the second appliance. Max total load of 20 amps.

An AC transformer must be used if using a low voltage appliance on the second relay or if using a DC transformer, then an inrush limiting device must be installed.

thermotouch
INTELLIGENT HEATING CONTROLS

Thermotouch 5235W Wi-Fi Programmable Thermostat

An Underfloor Heating Thermostat that allows you to control your electric Underfloor Heating system remotely.

The Thermotouch 5235W allows you to control your Underfloor Heating either via the colour touch screen or remotely through an app on your smart phone. The Thermostat can be mounted landscape or portrait and the sleek design is a perfect match for any room.

The 5235W is a single relay unit and therefore **cannot** be used for controlling both your Underfloor Heating and Heated Towel Rail.

7 day, 6 event heating schedule or can be used in manual mode

White fascia as standard, black coverplate can be purchased separately

Supplied with a floor sensor temperature probe. Alternatively, use the in-built ambient temperature sensor

Ability to control multiple Thermostats from one app and have multiple users controlling one Thermostat

Multiple heating modes to give you ultimate control over your heating

Control on the unit or from anywhere on your smart phone using the app (You don't need to be on the same network)

Can be mounted Portrait or Landscape

Thermotouch Manual Thermostats

Thermotouch Manual Thermostats are designed for applications where only an on/off function is required to control the floor temperature, typically when using off-peak or home automation.

The Manual Thermostat range allows you to set a temperature for your Underfloor Heating and then switch the heating via a simple on/off switch. In the case of using off-peak or home automation, the Manual Thermostat allows you to set your desired temperature and then control the on/off either by your home automation system or the switching of the off-peak power. All Thermostats are supplied with a floor sensor and conduit.

Thermostat Controls

46

Thermotouch 9.2mG Glass Manual Thermostat

The 5215 Manual Thermostat offers simple on/off controls and easy temperature adjustment. There are also some advanced settings including temperature limits and an ambient temperature sensor option. The sleek glass fascia makes it perfect for use in high visibility locations. The Thermostat is provided with a UK size back box as it is smaller than the Australian electrical plate.

Thermotouch 5255 Manual Dial Thermostat

The 5255 Manual Dial Thermostat features a simple on/off switch and a manual temperature dial. The red light indicator shows when the heating is operating. The unit fits the standard electrical backing plate for portrait mounting only. The 5255 is floor sensing only.

Thermotouch 5291 Manual DIN-Rail Thermostat

The 5291 Manual Thermostat features a simple temperature dial. The 5291 is designed to be mounted in your electrical box. The red light indicator shows when the heating is operating. The 5291 is floor sensing only.

Electrical Accessories

Underfloor Heating Cable Monitor

Code: 6025 *

For cable integrity monitoring during installation. Supplied with every kit purchased.

Spray Adhesive

Code: 6026

Useful for matting and loose wire installations where additional adhesion is required.

Floor Sensor Probe

Code: 5266/5269 **

Supplied with every Thermostat and is designed to provide accurate floor temperature control.

Contactor and Snubber

Code: 5279/5280/5286

Used to switch loads greater than 16 amps.

Snubber for use with Contactors

Code: 5281

The snubber prevents power spikes from passing through the contactor to the floor heating. Supplied with every contactor.

Cable Repair Kit

Code: 5270

To extend the cold tail or repair Underfloor Heating cables
(Professional use only)

Stock Code	Description	Unit	RRP \$ Incl.

6994	Plastic EU Thermostat Back Box	ea	\$20.00
5412	Cold Tail Extension Wire	Lm	\$17.00

*A 6025 is supplied at no charge when purchasing heating cable and a controller.

***Floor sensors and conduits are supplied with all Thermostats.

Insulation

Contents

Econoboard Coated Insulation	50
Econoboard Uncoated Insulation	52

Key Benefits of Econoboard Insulation

Econoboard insulation is recommended for an energy efficient electric Underfloor Heating system.

Econoboard offers a cost-effective thermal insulation board for concrete and timber substrates. A layer of Econoboard will help prevent heat loss into the substrate and ensure faster heat-up times, as well as providing a stable, flat substrate for the Underfloor Heating to be laid onto. Available in 6mm or 10mm boards, Econoboard gives you maximum insulation with minimal height build-up.

50% Increase in Efficiency

Improve the efficiency of electric Underfloor Heating by up to 50% by minimising heat loss into the substrate and ensuring faster heat-up times.

Multiple Applications

Econoboard offers an easy to install solution for both concrete and timber substrates and can be used on both walls and floors.

Lifetime Warranty

Econoboard is warranted against material defects for the lifetime of the original floor covering under which it is installed.

Without insulation

Heat loss into the substrate

Without insulation boards, heat energy is lost into the substrate before radiating up through the floor into the room. This is wasted energy.

With insulation

Improved efficiency and comfort

Econoboard reflects the heat energy up through the floor, resulting in increased efficiency and much lower running costs.

Econoboard Coated Insulation Boards

Manufactured using a high-density extruded polystyrene core and a polymer modified, fibre reinforced cement coating on both sides. Econoboard Coated adds rigidity and strength to a timber substrate.

Econoboard Coated is the recommended insulation board for use in wetrooms that are being waterproofed.

Installation Overview

Using Econoboard Coated and our range of fixing accessories quickly creates an ideal, stable substrate for tile adhesive and Underfloor Heating. It can be used on floors and walls and is 100% rot-proof which makes it ideal for use in bathrooms and wetrooms.

1. Ensure the substrate is secure and free from dust and any debris.
2. Cut boards to size with a sharp blade and position over the floor area in an offset brick pattern.
3. For fixing to a timber substrate, use fixing screws and washers at 300mm centres. For fixing to a concrete substrate, glue down using a full bed of cement based tile adhesive mixed to the manufacturer's specifications.

Fixing to a timber substrate

Fixing to a concrete substrate

Stock Code	Thickness (mm)	Board Size (m)	Board Area (m ²)	Pack Quantity	Pack Area (m ²)	R Value m ² k/w	RRP \$ Incl.
6106	6	1.2 x 0.6	0.72	8	5.76	0.15	\$339.00
6110	10	1.2 x 0.6	0.72	6	4.32	0.27	\$339.00

Accessories

6015 Reinforcing Tape

Reinforcing tape is used to help seal the joints between the boards when waterproofing over the Econoboard.

Allow 2m of tape per board.

6022 Fixing Washers and Screws

The fixing washer and screw packs include both the zinc fixing washers and screws for fixing down the boards to a timber substrate.

Allow 10 washers/screws per board.

Stock Code	Description	Unit	RRP \$ Incl.
6015	100mm Reinforcing Tape - 25m roll	ea	\$68.00
6022	Fixing Washers (32mm) and Screws	100pk	\$58.00

Econoboard Uncoated Insulation Boards

Manufactured using a high-density extruded polystyrene core, the uncoated boards provide maximum insulation for use directly on a concrete substrate.

Econoboard Uncoated is not suitable for waterproofing to be applied onto. For wetroom applications with waterproofing, we recommend Econoboard Coated. Econoboard Uncoated is not suitable to be screwed down, it must be glued to the substrate with a full bed of tile adhesive.

Econoboard Insulation

52

Installation Overview

Solid concrete floors and screeds absorb the cold and damp from below. Econoboard should be used before tiling to inhibit moisture and prevent heat loss into the substrate. Ideal for under tiled floors on concrete subfloors. For wetroom applications, we recommend Econoboard Coated.

1. Ensure the concrete substrate is free from dust and any debris.
2. Mix tile adhesive according to manufacturer guidelines and spread on substrate with a notched trowel. Ensure the adhesive has the correct moisture level and the boards are laid before the glue skins.
3. Place in an offset brick pattern and fix in position by pressing the boards firmly into the adhesive.

Stock Code	Thickness (mm)	Board Size (m)	Board Area (m ²)	Pack Quantity	Pack Area (m ²)	R Value m ² k/w	RRP \$ Incl.
6012	6	1.2 x 0.6	0.72	20	14.4	0.18	\$540.00
6014	10	1.2 x 0.6	0.72	10	7.2	0.3	\$400.00

Econoboard Uncoated Acoustic Properties

Econoboard Uncoated insulation boards will help to absorb impact sound resulting in decreased noise pollution, reducing impact sound by up to 20dB!

Model Shown: TF1800

Space Heating

Instant Heat Source

The fan heater provides an instant heat source in the room, drawing air across a heating element to instantly blow hot air into the room.

Plug-in or Hardwired

The fan heaters are supplied with a 1m lead and plug to easily plug into a power point. Alternatively, the plug can be removed for the unit to be hardwired.

Range of Applications

The instant heat source provided by the unit makes them useful in a range of applications from bathrooms, motels, classrooms or offices.

TF1800 Fan Heater

The Thermofan TF1800 boasts intelligent energy saving touchscreen controls. The unit is fully programmable, allowing you to set when you want it on every day of the week and at your desired temperature. Alternatively, you can use it in manual mode.

Why choose a Thermorail Heated Towel Rail

Transform your bathroom with the comfort and luxury of warm, dry towels.

Warm, Dry Towels

Gone is the experience of stepping out of a shower to a damp towel, now it's to a warm, dry towel.

Energy Efficient

Our range of dry electric element Heated Towel Rails are extremely energy efficient. An average 600x800mm ladder rail will cost as little as 1c per hour to run. The dry element also ensures a rapid heat-up time of approx 10-30 minutes.

Quality Stainless Steel

Our rails are made from high-quality Stainless Steel designed for use in the bathroom and are backed by our warranties for your peace of mind.

Healthy Drying

A Heated Towel Rail ensures your towel is kept dry, reducing the likelihood of germ and bacteria build-up.

Preserve Your Towels

A Heated Towel Rail will keep your towel dryer, therefore reducing the number of times it needs to be washed. Further, drying your towels on a rail as opposed to using a tumble dryer will extend your towels life span.

Australian Compliant

Our range of Heated Towel Rails are certified in accordance with Australian standard AS/NZS 60335.1 and AS/NZS 60335.2.43.

Types of Heated Towel Rails

The Thermorail range offers three different product types to suit your design and requirements.

Thermorad In-Wall Towel Dryer

Thermorad provides a revolutionary new way to dry your towels. The Thermorad panel is installed in your wall cavity directly behind where your towel rail will be installed. The panel creates an invisible towel dryer that reduces the drying time of your towels by up to 70% compared to a non-heated rail. The beauty of the Thermorad panel is that it can be used with any rail, robe hook or ladder without compromising on the design aesthetics of your room.

12Volt Low Voltage Heated Towel Rails

In a bathroom, there are electrical zones that influence where electrical items can be installed. In a wet area such as above a bath or in a shower and areas within 600mm of a tap, any electrical products need to be low voltage.

A 12V rail will still heat-up in the same time, reach the same temperature and cost the same to run as a 240V rail, however, the low voltage makes it safe for use in wet areas. All Thermorail 12V rails are supplied with a transformer which reduces the incoming voltage from 240V down to 12V.

240Volt Heated Towel Rails

The 240V range of Heated Towel Rails are designed for use in bathrooms, outside of the wet areas as mentioned above. Being 240V means that the rails can be hardwired directly to existing power or plugged in for a retrofit application.

The 240V range offers a variety of styles and designs, as well as several different colour finishes.

Available Styles

Thermorail Heated Towel Rails transform your bathroom with the comfort and luxury of warm, dry towels.

When you are looking to add that little bit extra to your bathroom design, there is sure to be something that suits you from our extensive rail range.

Thermorad In-Wall Towel Dryer

Create an invisible towel dryer

No one enjoys the experience of using a damp towel however it is a common reality for those who shower morning and evening or in areas of high humidity. The Thermorad sits invisibly in the wall and dries a damp towel in around 4-6 hours.

Reduce drying times by up to 70%

The Thermorad panel is designed to be concealed in the wall whilst radiating heat directly behind a towel rail, to reduce the drying time by up to 70% as opposed to a non-heated towel rail.

Suitable for use with any rail or robe hook

The beauty of the Thermorad is that it can be located behind any towel rail or robe hook, no matter what the style, colour or finish. It can even be installed behind a non-heated ladder providing the fixing points are outside the panel area.

Low energy usage

The Thermorad draws 160 watts an hour. This means that if it was running for 6 hours a day it would cost around 33 cents a day to run based on an electricity tariff of 34c/kWh.

Set and forget

The use of a programmable timer allows you to set up your preferred drying schedule to ensure your towel is dry whenever you come to use it. Alternatively, it can be wired to an on/off switch for manual operation. Timers need to be purchased separately.

Ten year warranty

The Thermorad panel is backed by a 10 year warranty to give you peace of mind that your product will last for years to come.

Thermorad In-Wall Towel Dryer

Stock Code	Size W x H x D (mm)	Output (W)	Voltage (V)	RRP \$ Incl.
TR5585	555 x 850 x 25*	160	240	\$489.00

*The overall size is 555x850mm with a heated area of 500x650mm.

Consider using a timer to control your Thermorad to ensure your towel is dry when you need it and to help control your running costs. See pages 106 - 107.

Thermorad overview video

Learn more about how Thermorad works and the benefits that it offers.

Hear from a happy customer

Nikki McGar from Interior Styling shares why the Thermorad is her favourite hidden feature in her bathroom.

Installation Overview

Modify frame work

The unit needs to sit between the studs in the wall with allowance for the power supply.

Double fixing requirements

For rails wider than 650mm, we recommend installing two Thermorad panels next to each other.

Fix Thermorad in position

Fix the panel flush with the wall frame using the four fixing positions on the panel.

Sheet wall and tile

Complete the wall installation and mount your rail above the Thermorad.

This is an illustrative guide only. Read the instruction manual that is supplied with the panel in full before attempting installation.

Thermorad FAQs

We have put together a range of answers to the most frequently asked questions about the Thermorad In-Wall Towel Dryers. If you have a question that isn't answered here please give us a call or scan the QR Code above to visit the Thermorad product page.

Does the Thermorad panel heat the room?

The Thermorad panel is primarily designed to dry your towels. It works on radiating heat from the wall surface, so the panel would help to take the chill out of the room however, this is not the primary purpose of the panel.

What is the heat-up time?

This will vary slightly depending on the thickness of your wall, however allow 45-60 minutes for the wall to heat-up and 4-6 hours to dry your towel.

Is there a particular spot in the wall the panel needs to be installed?

The panel needs to be installed flush with the front face of the stud wall so that there is no air pocket between the panel and the rear of the wall sheeting. The panel needs to be installed just below your towel rail, so the heat is radiating where your towel will be hanging.

12V Low Voltage Heated Towel Rails

Safe for use in wet areas

All the rails in this range are low voltage enabling them to be safely located anywhere in your bathroom or wet area providing you full flexibility with your bathroom design. See page 111 for electrical zoning.

Concealed dry element

All of the 12V ladder rails have a dry electric element that can be concealed wired on either the left or right-hand side of the rail while the vertical bars can be concealed wired at the top or bottom of the rail. Single Bar rails come as standard with right-hand side wiring, left-hand wiring is available upon request.

Transformer included

All of the Thermorail 12V range come with a 12V transformer meaning the only additional electrical item you require is a switch or timer to control the rail.

240Volt Heated Towel Rails

Multiflex wiring

Multiflex wiring provides a range of wiring options within one rail so the wiring location can be decided at the time of installation. The wiring options are either the top or bottom on either the left or right-hand side. For more details refer to page 110.

Concealed or exposed wiring

Multiflex wiring also offers the option of either concealed (hardwired) or exposed (plug-in) options to accommodate your requirements. (Ladders only)

Safe for use in bathrooms

The 240V units are safe for use in bathrooms outside of the wet area of a shower or bath. All Thermorail Heated Towels Rails are certified at or above the minimum IP safety level. For more details refer to page 111.

Thermorail Custom Plated Colour Finishes

Thermorail offers a selection of Heated Towel Rails which can be custom plated in a range of finishes to suit your bathroom.

Custom Plated

As a custom plated range, we can offer a wide variety of colours to match your bathroom tapware. Scan the QR Code below to view custom plated finishes.

Plated Lead Time

The rails are plated to order, this means there is a 4-8 week lead time on the plating.

Five Year Warranty

The warranty on the plated range of rails is 5 years.

Thermorail Timers

Why Consider a Towel Rail Timer?

A timer is recommended for controlling your Heated Towel Rail. The advantage of a timer is that it allows you to simply set and forget whilst experiencing a warm, dry towel every time you use the bathroom. It also ensures that the rail is never left on in the bathroom therefore helping you to reduce running costs.

7 Day Touchscreen Timer

The TRTS Thermorail Timer is a digital touchscreen timer ideal for controlling Thermorails. With the TRTS Thermorail Timer, you have the ability to program each day individually, 7 days the same or program week days to one schedule and weekends different. This timer has 4 switching times (2on/2off) per day and is simple to program with large, easy to read characters.

Underfloor Heating and Heated Towel Rail?

Check out our Thermotouch 4.3dC Dual Control Thermostat on page 44 which allows you to control both your Underfloor Heating & Heated Towel Rail on the one controller.

thermorail
ELECTRIC TOWEL HEATERS

Eco Timer

The Eco Timer is a simple timing device designed to go behind the switch plate (supplied with the ET12C and ET12CB timer). The timer operates on a 12 hour schedule meaning it will be on at the same time morning and evening each day of the week. The programmed time can be selected for a period from 1 to 11 hours and three heat settings can be selected: 50%, 75% or 100%. If the Eco Timer is turned off for more than 30 seconds it will lose its program.

Stock Code	Description	Size WxHxD (mm)	IP Rating	Max Load	RRP \$ Incl.
5289	Timer Only (No switchplate)	49 x 35 x 27	IP20	1A	\$93.00
ET12C	White switch plate and 5289 Timer	70 x 120 x 10	IP20	1A	\$118.00
12CB	Black switch plate and 5289 Timer	70 x 120 x 10	IP20	1A	\$118.00

EB11 Boost Timer

The EB11 Boost Timer allows you to boost the heat for 5 different periods of time without having to remember to switch it off. The timer will revert back to 'Off' mode after the selected amount of time, thus reducing energy consumption. These units are only suitable for resistive loads and therefore can only be used to control 240V Heated Towel Rails. As the EB11 is a European design, it doesn't fit onto a standard wall bracket, therefore a separate electrical back box is supplied with the unit.

Stock Code	Colour	Size WxHxD (mm)	IP Rating	Max Load	RRP \$ Incl.

Multiflex Wiring Explained

Our Multiflex Wiring offers flexibility and ease of wiring for your Heated Towel Rail.

Multiflex wiring means there is a range of different wiring options within the one Heated Towel Rail so the wiring can be decided at the time of installation. The wiring options available are either at the top or the bottom of the rail, and on the left or right hand side, making it possible to come from any of the four mounting points. Wiring can also be exposed (plug-in) or concealed (hardwired).

Any rail with an 'M' after the numerals has Multiflex Wiring.

Top and bottom wiring

Wiring connection points come as standard at the base of the unit.

Due to being a dry element rail this can be turned over/upside down (there is no difference between the top and bottom) and you can have the connection points at the top of the unit.

Left and right hand wiring

The unit has wiring connection points on both the left and right hand side and the lead comes as a separate part.

The lead can be easily plugged into the desired side during installation.

Concealed and exposed wiring

The Thermorail can be hardwired (concealed) through one of the mounting legs providing a clean, sleek look. (A)

Alternatively, the Thermorail can have exposed (plug-in) wiring which allows the wiring to come out the base of one of the mounting legs on the side closest to the wall and get plugged into a power point. (B)

Scan the code to view our video that explains how **Multiflex** wiring works.

Positioning Your Thermorail

Bathrooms are zoned according to Australian Standards. Positioning of a Thermorail Heated Towel Rail is the responsibility of the electrician.

Electrical safety in wet areas

ZONE 0

Inside bath or shower. Any fitting used in this zone must be low voltage (max 12V) or a rating of at least IPX7 is required. Transformers and switches must be outside of zone 2.

ZONE 1

Area above the bath to a height of 2.25m from the floor. A minimum of IPX4 (IP44) needed. Thermorails in this zone must be hardwired and protected by a 30mA RCD on the circuit. The switch must be outside of Zone 2.

ZONE 2

Covers 600mm outside the perimeter of the bath to a height of 2.25m from the floor. Also covers a radius of 600mm around a wash basin. Minimum rating of IPX4 (IP44) needed in this zone.

OUTSIDE ZONES

No specific requirements unless water jets are intended for cleaning purposes.

ALL ZONES

All electrical circuits in bathrooms must be protected by an RCD. If exposed to water jets such as a shower, a rating of at least IPX5 is required.

(Diagram for illustrative purposes only)

IP Ratings

Electrical fixtures in bathrooms are certified using an IP (Ingress Protection) rating. The IP is followed by 2 numbers and refers to the level of protection against the ingress of foreign bodies (1st number) and protection against the ingress of liquids (2nd number). The higher the second number is the greater protection the item has from water ingress.

Zonal Guidelines

All domestic installations must comply with guidelines based on the zonal requirements. Thermogroup recommends that all electrical work is carried out by a qualified electrician in accordance with current regulations. Consult your electrician for wiring requirements in your area.

112 Solid Surface Range

Solid Surface

Solid Surface is an engineered material composed from acrylic resins and pigments. The advantage of this is a solid colour throughout and free from silica. Solid Surface offers a durable product that is stain resistant, antimicrobial and is easy to maintain.

Shower Stools

The Solid Surface shower stool range offers the luxury of adding a seat in your shower to relax on after a long day. The shower stools can also be used as a showcase in the bathroom, perfect for adding to your styling touch.

Bath Caddies

The bath caddies make for the ultimate bath experience, offering you a place to rest your book, phone or even a glass of wine during your bath. The bath caddies can also be used as a styling piece in your bathroom.

Mirror Cabinet Range

Bathroom Friendly Cabinets

The Ablaze mirror cabinets are designed to last in the moisture of a bathroom thanks to their construction from wet area approved MDF with epoxy paint protection for the ultimate durability.

Durable Finish

The cabinets are finished with a durable, satin finish, further helping to ensure the lifetime of the cabinet and giving a high quality and durable appearance.

Quality Hinge Construction

The hinges are one of the keys to the cabinet's longevity. The larger mirrors such as the pill and the arch cabinets feature three hinges rather than the traditional two for maximum strength.

Before Thermomirror

After Thermomirror

Thermomirror Demister Pads

Thermomirror is a must for every bathroom. The ultra-thin demister pad provides a clear and condensation-free mirror in any bathroom and is available in a range of practical sizes. Thermomirror is suitable for use with any brand of mirror.

The demister must be applied directly to the back of the mirror. The demister has a self-adhesive back for easy application. The demister is designed to warm the mirror slightly to eliminate the difference in temperature between the mirror and the bathroom ensuring it remains fog-free.

Stock Code	Description	Size L x W (mm)	Heat Output (W)	RRP \$ Incl.

Warranty Information

Thermogroup covers all its products with a satisfaction guarantee. In addition, Thermogroup will supply a replacement product where a fault is shown to be caused by faulty manufacture, materials or workmanship providing the goods have been installed correctly & according to the installation instructions. This guarantee does not include removal, freight or installation costs.

Our goods come with guarantees that cannot be excluded under the Australian Consumer Law. You are entitled to a replacement or refund for a major failure and compensation for any other reasonably foreseeable loss or damage. You are also entitled to have the goods repaired or replaced if the goods fail to be of acceptable quality and the failure does not amount to a major failure.

Guarantee Information

All Thermogroup products are covered by the warranty period as stated in this book.

If the product develops a fault within the warranty period due to normal wear and tear, Thermogroup, at its discretion, will recognise whether it's a faulty product or not. If it is impossible or not economical for the manufacturer to repair the product, the manufacturer will replace the faulty product with a new unit of the same model or if there is no stock available of the same model as the product, the manufacturer will replace the product with a new unit of a similar size. No responsibility can be taken for altered dimensions and lining up of existing holes.

The replacement service offered within the warranty period only covers the faults and problems as developed from the manufacturer's errors. Any damage caused by improper use, carelessness or incorrect installation is not covered. Thermogroup is not responsible for any monetary loss or injuries caused by improper use of the product.

Thermogroup are not held accountable for:

1. Damages or repairs as a result of incorrect installation or application.
2. Damages as a result of floods, fires, winds, lightning, accidents, corrosive atmosphere or any other conditions/situations deemed beyond the control of Thermogroup.
3. Use of incompatible components or accessories.
4. Products installed outside of Australia.
5. Normal maintenance and care procedures as described in the installation guide.
6. Parts not supplied or designated by Thermogroup.
7. Damages or repair required as a direct result of any improper maintenance, operation or servicing.
8. Failure to power up or start as a result of inadequate/interruption of electrical service.
9. Changes in the appearance of the product that do not directly affect the performance of the product.
